

TAXCALC — A SALES AND USE TAX SOLUTION

Better Monetize Content Services and Accurately Determine Tax

Billing management is a complex process. And tax rates and rules across jurisdictions are constantly changing. But what if you could reduce your tax management burden and greatly simplify the process? With the comprehensive sales and tax solution from Evergent, you can. The Evergent TaxCalc (TC) helps cloud video service providers better monetize content services and accurately determine tax. As an add-on option to the Evergent User Lifecycle Management Platform, TaxCalc can be used with our invoice and billing service to determine the appropriate tax to be collected from the end user and remitted to the local tax authority.

As a video service provider, here are the benefits you can expect:

We'll Simplify Your Tax Needs — Our Solution is Easy and Streamlined

TaxCalc provides the convenience you require and reduces your tax management burden. It automates and simplifies tax calculation, management and reporting. It can be used to calculate tax based on the taxing jurisdiction and to retrieve the tax area's associated with master address records or the address information passed along in a transaction.

Apply tax rates for addresses with matching performed at any level from country, state, county, city, zip, or a string value for the tax region

- Apply independent taxes to a single charge, and each tax can have a type of Flat Fee or Percentage

Calculate and report use tax:

- Accruals
- Asset and goods management
- Inventory removal
- Purchase order

We're Integrated — No Need to Buy Another System or Work with Another Vendor

You don't need to purchase another system, or work with another vendor — TaxCalc can be added on to the Evergent User Lifecycle Management Solution. That means no additional bills to manage, vendors to deal with, or multiple points of failure.

We're Scalable — a Software-as-a-Service (SaaS) Solution Designed for Today and Tomorrow

Our cloud-based, SaaS-based solution grows with your needs.

We'll Help You Monetize Content — Make Revenue Management Easier

Used with the Evergent Revenue Management Module, it helps companies handle revenue management, global tax, billing and payment information — tasks that can help you better monetize your content.

The Evergent TaxCalc Solution

Evergent's TaxCalc Solution includes the software required to support the following:

Tax Calculation Engine

The Calculation Engine performs tax calculations based on standard rates and rules supplied by Vertex, a software technology for managing transaction tax. The Evergent Calculation Engine can also be configured by your tax professional to provide non-standard rates and rules as well.

Tax Area Lookup

This part of the solution identifies jurisdictions based on city, state, postal code, and other address information using the Tax Geographic Information System (Tax GIS) database. Use this during transaction line item processing within Evergent CCB or it can be used to pre-assign a tax area to your company address master and customer address master database.
